Ready-to-deploy products

100%

Custom-built

Who We Are

Chromatic Softwares is a founder-led custom software development practice based in Metro Manila, Philippines. We design and build web and mobile applications — and a growing line of ready-to-deploy business systems — for small and medium businesses across real estate, retail, manufacturing, and contract-based industries.

With 6 years of experience delivering custom software, we've completed 50+ projects and built a library of 7 ready-to-deploy systems that can be launched quickly and configured around how your business actually runs.

We are currently a solo, founder-led practice — every engagement is handled directly and personally, with no hand-offs between account managers, designers, and developers. What you discuss with us is what gets built.

Our Mission

We build software that gives businesses an edge—making everyday operations more efficient, helping them scale, and giving them the tools to work smarter.

Our Vision

To build software that stands the test of time—creating lasting value for the businesses we serve.

Why Work With Us

- **Integrity first** — Honest timelines, clear pricing, and code we're proud to put our name on — no surprises.
- **Built with passion** — Every detail is considered, because the work is personal to us.
- **Real partnership** — We work alongside you, not above you — invested in the outcome, not just the deliverable.

Products & Solutions

Alongside custom development, we maintain a growing catalog of ready-to-deploy systems, built for problems we see most often. Each one can be deployed as-is or tailored to your workflow.

Timekeeping, Attendance & HRIS *Workforce Management*

From clock-in to payroll-ready, all in one system. Biometric-ready time and attendance, shift and schedule management, payroll batching, online payslips with QR codes, and a mobile app with geolocation time-in/time-out — built for teams with contract-based and shifting workforces across multiple branches.

Employee Monitoring Software *Workforce Security*

Full visibility into workforce activity with automatic threat detection — real-time screen monitoring, application and website usage tracking, keystroke and clipboard logging, idle time and productivity scoring, and tamper-proof audit logs.

Accounting System *Finance & Accounting*

Bookkeeping, invoicing, and financial reporting in one place — general ledger, accounts payable and receivable, bank reconciliation, expense approval workflows, and financial statements (P&L, balance sheet, cash flow).

Property Management System *Real Estate*

Run a real-estate portfolio from one place — tenant and lease tracking, automated billing and invoices, maintenance ticketing, and owner and occupancy reports.

MLM Software *Direct Sales*

A configurable multi-level marketing platform with binary/unilevel plans, a commission and bonus engine, genealogy tree view, and e-wallet and payout support.

Parking Management System *Facilities & Transportation*

Smart parking operations with real-time space monitoring, IoT sensor and automated barrier integration, a mobile app for drivers, and cashless payment support — built for commercial lots, buildings, and multi-site facilities.

Ride-Hailing Service Software *Mobility*

A ready-to-deploy ride-hailing platform connecting riders and drivers with real-time booking, dispatch, and trip management — configurable for on-demand transport operations.

Industries We Serve

- **Real Estate & Property** — Tools for property managers, brokerages, and landlords to stay on top of portfolios and tenants.
- **Coffee Shops & Retail** — Reliable timekeeping, attendance, and payroll solutions for cafes, retail stores, and growing businesses.
- **Manufacturing** — Production tracking, inventory, and floor-to-office visibility for growing manufacturers.
- **Contract-Based Workforces** — Timekeeping, scheduling, and HR tools designed for businesses that run on contract and shift workers.

Let's Build Something

Tell us about your business and what you're trying to solve — we'll come back with a plan.
